Structure of Pipe

Advantages of D-coated Pipe

1. Steel pipe is primarily coated with ABS and the surface is secondarily coated with the new material, PAABS.
2. In comparison to the conventional ABS coated pipe, D-coated pipe is outstanding in resistance against oils and chemicals. In particular, D-coated pipe is not cracked or discolored by salt, rustproof oil or cutting oil.
3. D-coated pipe comes in a variety of colors to suit diverse images or for use per item.
4. D-coated pipe is outstanding in durability and processing is convenient. With rustproof coating on the inside, D-coated pipe is outstanding in corrosion resistance.

※ D-coated pipe is printed with 'D-COAT G.S. ACE'.

Features

1. D-coat (double coated) is a product created by coating steel pipe with ABS and then coating the primarily coated surface with PAABS, the new material.
2. D-coated pipe, unlike the conventional ABS pipe, is very strong against sweat, cutting oil and infrared ray, etc. Also, the coating does not crack.
3. D-coated pipe is outstanding in durability and processing is convenient. With rustproof coating on the inside of pipe, D-coated pipe is outstanding in corrosion resistance.
